1. Introduction to Gold Scalper PRO

Gold Scalper PRO v2.57 represents the pinnacle of automated XAUUSD (Gold) trading technology. Designed specifically for the EXNESS brokerage platform, this Expert Advisor combines sophisticated market analysis with an intelligent Dynamic Recovery System that replaces traditional martingale approaches with a safer, more calculated loss recovery mechanism.

Built by professional traders for serious investors, this EA leverages multi-timeframe trend analysis, momentum confirmation filters, and adaptive risk management to deliver consistent trading performance while protecting your capital through multiple layers of safety mechanisms.

Why Choose Gold Scalper PRO?

- **No Martingale Gambling:** Smart recovery system with 15% emergency risk cap
- **Professional Grade:** 12-level dynamic recovery with automatic lot calculation
- **Capital Protection:** Daily profit limits, drawdown protection, and cooldown systems
- **Market Intelligence:** EMA trend analysis, momentum filters, and volume confirmation
- **Fully Automated:** Set and forget with 24/7 autonomous operation

1.1 System Requirements

Requirement	Specification
Trading Platform	MetaTrader 5 (MT5)
Recommended Broker	EXNESS (optimized)
Trading Symbol	XAUUSD (Gold)
Minimum Balance	\$500 (recommended \$1000+)
Timeframe	Any (M5-M30 recommended)

VPS Recommended

Yes, for 24/7 operation

2. Core Features Overview

Gold Scalper PRO v2.57 incorporates over 20 advanced trading features working in harmony to identify high-probability entry points while maintaining strict risk discipline. The system has been rigorously tested and refined through multiple versions to achieve optimal performance.

Dynamic Recovery System

Intelligent lot calculation based on cumulative losses with 15% risk emergency cap and automatic level progression.

3-Candle Range Filter

Skips trades when last 3 candles exceed 25000 points, avoiding trend middle/end entries.

Daily Profit Limit

Auto-stops trading at target profit, resetting daily at 7:00 AM Baku time (UTC+4).

Daily Drawdown Protection

Tracks peak balance and stops trading if drawdown exceeds configured limit.

Low Risk Lot Cap

Caps maximum lot at 0.30 when SL risk is below 10% of account balance.

Swing-Based SL/TP

Dynamic stop-loss and take-profit based on recent price structure with adjustable RR ratios.

EMA Trend Analysis

Dual EMA system (Fast 7, Medium 22) with separation filter to avoid flat markets.

Momentum Confirmation

Body percentage and wick ratio filters to eliminate fake breakout entries.

2.1 Version History Highlights

Version	Key Addition
v2.55	3-Candle Range Filter for trend safety

2. Core Features Overview

v2.56 Dynamic Recovery System (replaces martingale)

v2.57 Daily Balance Drawdown Protection with peak tracking

3. Dynamic Recovery System (v2.56)

The Dynamic Recovery System is the crown jewel of Gold Scalper PRO, representing a paradigm shift from dangerous martingale strategies to an intelligent, calculated approach to loss recovery. Unlike traditional martingale systems that blindly double positions, our system calculates optimal lot sizes based on actual cumulative losses and market conditions.

3.1 How It Works

Recovery Logic Flow

- **Level 1:** Normal trading with minimum lot (0.02)
- **On Loss:** Cumulative loss is recorded, level increments
- **Lot Calculation:** Required lot = (Cumulative Loss / Expected Profit per Lot) + Bonus Lot
- **On Win:** Cumulative loss resets to zero, returns to Level 1
- **Max Levels:** 12 recovery levels before system reset

3.2 Recovery Level Structure

Level	Behavior	Protection
1-6	Standard recovery progression	15% risk cap monitoring
7-8	Enhanced SL buffer (70 pts)	Breakeven trigger at 1.0 RR
9-10	Maximum SL buffer (90 pts)	Trailing stop activation at 1.5 RR
11-12	Ultra-wide SL buffer (120 pts)	Full protection suite active

3.3 Emergency Risk Cap (15%)

If calculated lot size would risk more than 15% of account balance on the stop-loss, the system automatically:

1. Resets recovery level to 1
2. Clears cumulative loss counter
3. Returns to minimum lot size (0.02)
4. Logs emergency reset event for review

Recovery System Safety

The 15% risk cap acts as a circuit breaker, preventing the system from entering dangerously high exposure levels. This ensures capital preservation even during extended losing streaks.

4. Risk Management Framework

Gold Scalper PRO employs a multi-layered risk management architecture designed to protect your capital under all market conditions. Every trade is subject to multiple validation checks before execution.

15% MAX SL RISK	10% LOW RISK CAP	12 MAX LEVELS	1.5X DEFAULT RR
---------------------------	----------------------------	-------------------------	---------------------------

4.1 Low Risk Lot Cap (10% Rule)

When the calculated stop-loss risk represents less than 10% of account balance, the system enforces a maximum lot cap of 0.30. This prevents over-leveraging during favorable conditions and maintains consistent risk exposure.

```
IF (Total Risk < 10% of Balance) AND (Lot > 0.30) THEN Lot = 0.30 LOG: "Low Risk Cap Applied"
```

4.2 Daily Profit Limit

The EA automatically stops opening new positions once the daily profit target is reached. Existing positions are allowed to close naturally. The counter resets at the configured hour (default: 7:00 AM Baku time).

Parameter	Default	Description
Daily Profit Target	\$250	Auto-stop trigger threshold
Reset Hour	7:00	Baku time (UTC+4)

4.3 Daily Drawdown Protection (v2.57)

New in version 2.57, this feature tracks the daily peak balance and immediately stops trading if the account drops below the configured drawdown limit. This prevents emotional revenge trading and protects against black swan events.

Drawdown Protection Features

- Real-time peak balance monitoring
- Automatic trading halt on limit breach
- Daily reset at configured hour
- Recovery system reset to Level 1 on trigger
- Detailed logging for performance analysis

5. Entry Signal Filters

Gold Scalper PRO employs a sophisticated multi-filter entry system that analyzes trend direction, momentum strength, and market structure before executing any trade. Each filter serves a specific purpose in eliminating false signals.

5.1 Trend Analysis (EMA System)

The EA uses a dual Exponential Moving Average system to determine market direction and filter out ranging conditions:

EMA	Period	Purpose
Fast EMA	7 periods	Short-term trend direction
Medium EMA	22 periods	Medium-term trend confirmation

EMA Separation Filter

To avoid trading in flat markets, the system requires a minimum separation of 90 points between the Fast and Medium EMAs. If the market is consolidating (EMAs too close), all entries are blocked.

5.2 Momentum Filters

Body Percentage Filter

Requires minimum 20% body-to-range ratio. Eliminates doji and indecision candles.

Wick Ratio Filter

Maximum 50% wick-to-range ratio. Avoids rejection candles and false breakouts.

Break & Hold Filter

Requires price to break previous candle high/low AND close strongly in direction.

One Trade Per Candle

Prevents over-trading by allowing only one entry per candle formation.

5.3 3-Candle Range Filter (v2.55)

This safety filter analyzes the range of the last 3 completed candles. If the total range exceeds 25,000 points (approximately \$250 at 0.01 lot), the EA skips the trade to avoid entering during strong trending conditions where reversals are more likely.

```
IF (HighestHigh(3) - LowestLow(3)) > 25000 points THEN SKIP_TRADE LOG: "3-Candle  
Filter Active - Range Too Large"
```

6. Protection Mechanisms

Beyond the recovery system, Gold Scalper PRO incorporates multiple standalone protection mechanisms that work together to safeguard your trading capital.

6.1 Swing-Based Stop Loss

Instead of fixed pip distances, the EA calculates stop-loss levels based on actual market structure:

1. Identifies highest high and lowest low over lookback period (default: 3 candles)
2. Applies configurable buffer (default: 50 points)
3. Sets SL below swing low for buys, above swing high for sells
4. Take-profit calculated as SL distance multiplied by RR ratio (default: 1.5x)

6.2 Time Filters

The EA includes configurable trading sessions to avoid low-liquidity periods:

Session	Default Hours	Timezone
Session 1	02:00 - 18:00	Baku (UTC+4)
Session 2	19:00 - 00:00	Baku (UTC+4)

6.3 Spread Protection

The EA monitors current spread and blocks entries when spread exceeds the configured maximum (default: 100 points). This prevents entries during news events or low-liquidity periods with excessive slippage.

6.4 Post-Trade Cooldown

After each trade closes, the EA enters a cooldown period (default: 65 seconds) before evaluating new entries. This prevents emotional over-trading and allows the market to stabilize.

6.5 Balance Protection

Monitors account balance peak and enters cooldown mode if drawdown exceeds configured limit. During cooldown, all new entries are blocked for the specified duration.

7. Level 7+ Advanced Features

When the recovery system reaches Level 7 or higher, additional protection mechanisms activate to secure positions and maximize the probability of successful recovery.

7.1 Breakeven Protection

Once price reaches 1.0x Risk-Reward (equal to initial risk amount), the stop-loss is automatically moved to the entry price, creating a risk-free trade.

Trigger: Current RR \geq 1.0 Action: SL = Entry Price Result: Risk-free trade (worst case = breakeven)

7.2 Trailing Stop Activation

When price reaches 1.5x Risk-Reward, a trailing stop activates with configurable distance (default: 50 points), locking in profits as price continues to move favorably.

7.3 Dynamic RR and Buffer Adjustment

Higher recovery levels benefit from adjusted parameters:

Level	RR Ratio	SL Buffer
1-6	1.5x (default)	50 points
7-8	1.5x (fixed)	70 points
9-10	1.5x (fixed)	90 points
11+	1.5x (fixed)	120 points

7.4 Volume Confirmation (Optional)

For Level 7+ entries, an optional volume filter can be enabled requiring current volume to exceed the 10-period average by a configurable multiplier (default: 1.5x). This ensures entries occur during periods of genuine market interest.

8. Configuration Parameters

Gold Scalper PRO offers extensive customization options to adapt the system to your trading preferences and account size. All parameters are accessible through the MT5 input panel.

8.1 Essential Trading Parameters

Parameter	Default	Description
Magic Number	44114411	Unique identifier for EA orders
Reference Lot	0.02	Base lot for non-recovery mode
Max Orders	1	Maximum simultaneous positions
Trade Interval	10 sec	Minimum time between orders
Post-Trade Cooldown	65 sec	Wait after position close

8.2 Recovery System Parameters

Parameter	Default	Description
Use Dynamic Recovery	true	Enable smart recovery system
Max Recovery Levels	12	Maximum progression depth
Recovery Bonus Lot	0.02	Additional lot for profit
Max SL Risk %	12%	Emergency reset threshold
Min Loss Threshold	\$5	Use min lot below this loss

8.3 Protection Parameters

Parameter	Default	Description
Daily Profit Target	\$250	Auto-stop profit level
Daily Max Drawdown	\$350	Peak-to-current limit
Max Spread	100 pts	Entry block threshold
Low Risk Lot Cap	0.30	Max lot when risk < 10%

9. Performance Statistics

Gold Scalper PRO provides comprehensive real-time statistics directly on your MT5 chart, enabling continuous performance monitoring and informed decision-making.

9.1 Displayed Metrics

Trade Statistics

Total trades, win rate, win/loss count, total profit/loss

Recovery Status

Current level, cumulative loss, recovery mode indicator

Daily Tracking

Daily profit vs target, drawdown status, peak balance

Level Statistics

Per-level win rates, usage counts, profit breakdown

9.2 Level Performance Tracking

The EA maintains detailed statistics for each recovery level, allowing you to analyze performance patterns:

- Number of times each level was used
- Win count and win rate per level
- Total profit/loss per level
- Historical level progression patterns

9.3 Global Variables Persistence

All critical state data (recovery level, cumulative loss, peak balances) is stored in MT5 Global Variables, ensuring continuity even if the EA is restarted or the platform is closed.

10. Important Notice

Customization Notice

All setups — including risk management budget, entry lot sizes, daily profit targets, drawdown limits, and protective thresholds — are fully customizable to match your trading capital and risk appetite. Every parameter can be adjusted to fit your specific account size and personal strategy preferences. Trade smart, trade within your limits.

10.1 Risk Disclaimer

Trading foreign exchange and gold carries a high level of risk and may not be suitable for all investors. Past performance is not indicative of future results. The Dynamic Recovery System, while designed with multiple safety mechanisms, cannot guarantee profits or prevent losses.

10.2 Recommended Practices

- Start with a demo account to familiarize yourself with the system
- Use only risk capital that you can afford to lose
- Regularly monitor EA performance and adjust parameters as needed
- Maintain adequate account balance for intended lot sizes
- Use a reliable VPS for uninterrupted 24/7 operation
- Keep MT5 platform and EA updated to latest versions

10.3 Broker Compatibility

While optimized for EXNESS, the EA can work with any MT5 broker offering XAUUSD trading. Ensure your broker provides:

- Competitive spreads on XAUUSD
- Reliable execution with minimal slippage

- Flexible lot sizing (micro lots supported)
- Stable server connectivity

11. Contact & Support

We are committed to providing exceptional support to all Gold Scalper PRO users. Our team is available to assist with installation, configuration, and any questions you may have.
